

Compound Class II Cavity Preparation for Amalgam — Reference Pictures

Year 3 Preclinical Conservative Dentistry · Cairo University · Week 10 practical (teeth 47 & 36)

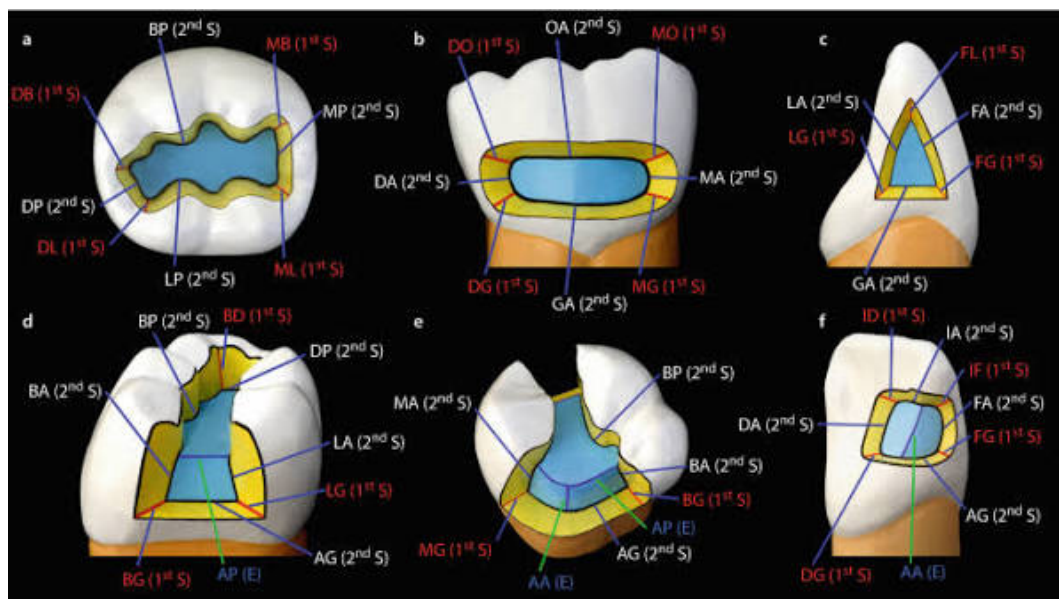

1. Compound Class II for amalgam: occlusal dovetail and proximal box; gingival floor and axial wall with bevelled gingival margin as drawn.

2. Amalgam proximal box: (A) 90° cavosurface margins and box walls at the DEJ; (B) pulpal floor and proximal retention lock.

3. On a typodont: gingival seat, pulpal floor and 0.5 mm clearance with the adjacent tooth.

4. Cavity nomenclature: walls, line angles and point angles (Class II in d, e).
